**D. ADDITIONAL COMMENTS TO SUPPORT JD:** This determination is only for the ditch, identified as Wetland 1 by the applicant, and does not include any other aquatic resources within the site location. The ditch is located entirely within the ditch section of Fairlakes Avenue, and within the adjacent health care center. The ditch does not drain wetlands or act as a tributary. A review of aerial photos determined Wetland 1 was constructed in upland around 1984 and 1985 at the time the adjacent parking lot was constructed. It is not clear if wetland characteristics were present between 1985 and 1999. Between 1999 and 2000, changes were made to the area of Wetland 1 that resulted in surface water being conveyed to Wetland 1 as part of further development of the health care center. Concrete drainage ways were constructed in upland to convey water from the health care center to Wetland 1. The concrete drainage ways are present today. Aerial photography confirms the site was constructed in upland as a ditch section between Fairlakes Avenue and the health care facility, and that surface water is intermittently present and no defined tributary is present. The subject ditch, identified as Wetland 1, is shown in figures labeled MVP-2019-01326-DAS (AJD Drawings) Page 1-3 of 3 that are the subject of this AJD and the project area in review. The remaining water resource identified as Wetland 2, is not being considered as part of this jurisdictional determination.

<sup>1</sup> In many cases these excluded features will not be specifically identified on the approved JD form, unless specifically requested. Corps Districts may, in case-by-case instances, choose to identify some or all of these features within the review area.
