^{*} The National-Scale Air Toxics Assessment (NATA) is EPA's ongoing, comprehensive evaluation of air toxics in the United States. EPA developed the NATA to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that NATA provides broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. More information on the NATA analysis can be found at: https://www.epa.gov/national-air-toxics-assessment.

1.3 Minority Populations

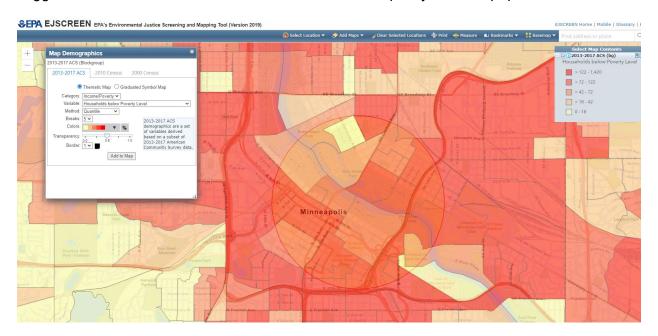

Note: Population blocks of minority populations greater than 50% would constitute an EJ population (Andrew Perez, Corps of Engineers, New Orleands, pers. comm). The map below suggest a mixture of populations, and would not qualify as an EJ population.

Appendix F

1.4 Low-Income Populations

Note: Population blocks of low income households greater than 20% would constitute an EJ population (Andrew Perez, Corps of Engineers, New Orleands, pers. comm). The map below suggest a mixture of income households, and would not qualify as an EJ population.
