Beneficial Use Categories

S = Stockpile Material that is stockpiled at locations where it is available for removal and active beneficial use at other locations. Examples of this type of use include ice control, road maintenance, general fill, concrete or bituminous aggregate, etc.

L = Landfill Material placed directly at a permanent location for a beneficial use. Subcategories are as follows:

L1 - General fill placed for commercial, residential, industrial, or recreational development; for reclamation of excavated areas, such as gravel pits; or for stabilizing eroding areas.

L2 - Fill placed for recreational beach enhancement, maintenance, or creation. Credit for this category is taken when the OSIT acknowledges that material as placed would provide recreational benefits.

L3 - Fill placed for environmental enhancement.

A = Public Sites that are in public ownership at any level of government or non-profit organizations where the general public will benefit.

B = Private Sites that are in private ownership of any type.

In general, beneficial use is credited when material is placed at any location where it is obviously used productively or the potential exists for it to be used. When a transfer site is excavated, no credit is taken at the time of excavation. The credit is received as the excavated site is re-filled. Example: Approximately 585,000 cubic yards was removed from the Lost Island transfer site (5-744.7-LWT) for environmental enhancement at Weaver Bottoms (5-744.0-RMP) in 1986. From 1987 to 1995 credit was taken for 293,590 cubic yards in category L3 and will continue to be taken for another 291,410 cubic yards.
