- List water(s) and area/length within review area – Required:
  NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District’s list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

This determination of adjacency is also supported by the National Wetlands Inventory Map. This wetland is jurisdictional by rule as the unnamed intermittent tributary adjacent to Wetland 1, flows into a second intermittent unnamed tributary, which then flows into a perennial tributary, which then flows into the Cottonwood River, which then empties into Minnesota River, a TNW.</td>

<td>Grassed Waterway 1</td>
<td>(b)(4)(vi) Erosional features/non-wetland swales/lawfully constructed grassed waterways</td>
<td>The agent submitted appropriate documentation in the delineation report that shows the unnamed, intermittent tributary is actually a grassed waterway. Aerial photography suggests that the grassed waterway was constructed sometime between 1955 and 1991. Site photos show the grassed waterway to be devoid of the physical characteristics of an (a)(5) water (bed, banks and an OWHM). Although the soils in the area are mapped as hydric, the site photos show the grassed waterway dominated by smooth brome grass (Bromus inermis (FACU)). These characteristics are consistent with CFR 328.3 part (b)(4)(vi) and therefore not a water of the U.S.</td>
