## SECTION SF 30 BLOCK 14 CONTINUATION PAGE

**SUMMARY OF CHANGES****2. Changes to the Specifications and Drawings:**

Section 00800, Clause 52.211.10: Delete the second sentence of the first paragraph. This removes the interim completion date requirement.

Section 01000, Paragraph 3.3.3. Insert "Annual or perennial" at the beginning of the second sentence.

Section 01140, Add a new paragraph 1.4 CONSTRUCTION RESTRICTION - No work shall be conducted, or equipment operated on areas identified as CONSTRUCTION RESTRICTION at the Above West Newton site between the dates of 15 May and 30 September. Drawing M-P5-60/025, Sheet 15 will be amended as follows:

Sheet 15 will be changed to identify a strip of land 75 feet wide from the East shoreline to the West (into the site). The restricted area begins at a location 100 feet downstream (south) from the dredge access location and extends along the shoreline to the south for 1,500 feet. This Construction Restriction area will also include the rock vanes along the shoreline.

Section 02920, Paragraph 2.1.2 Seed Species to read: The seed will consist of winter wheat (*triticum aestivum*) if planted in the fall and Canada wild rye (*Elymus canadensis*) if planted in the spring.

Section 02920, Paragraph 3.3.2 Seeding Rate to read: Seed shall be applied at the rate of 45 pounds PLS per acre for winter wheat and 2 pounds per acre for Canada wild rye.

**3. BIDDER QUESTION:**

1. What are the wind dams constructed of in the dredge area and what is the contractor expected to do with the wing dams."

Most wing dams were constructed in the 1800s to constrict flow to a narrower deeper channel. They were constructed in layers of willow/brush mats and stone. They extended from the river bank toward the main channel. Areas where several wing dams are located are called wing dam fields. The area between the wing dams in these fields filled in with sediment and islands often formed. The Above West Newton site is one such island. As identified in the specifications Section 02323, paragraph 1.3 DREDGED MATERIAL CHARACTERISTICS, "The Contractor shall implement a method for removing and disposing of the trees and debris. All material that can not be transported hydraulically shall be disposed of as debris and waste in accordance with SECTION 01000 GENERAL." However, excavating deeper holes under the wing dams and allowing the material to slough into the holes will be acceptable as long as the final excavation grade is met.

(End of Summary of Changes)
